 **LUSH FORESTS,
JEJU’S GREEN BREATH**

COVER. JEJU GOTJAWAL

The scent of moss
clings to my sleeve.

When fern fronds
brush against my chest,

Gotjawal stands

where it always has,

wrapping me

in its green breath.

Leaves beyond leaves,

time flowing through
the spaces between.

As Gotjawal deepens,

it slowly fills
the month of June.

JDC MAGAZINE

JUNE 2026

Jeju Free International City Development Center (JDC)’s digital magazine, **Dream of Jeju**, is published to share and realize Jeju’s vision as a Free International City. This month’s issue returns under the theme Lush Forests, Jeju’s Green Breath. It features a commemorative message from newly appointed President Song Seogeon as JDC marks its 24th anniversary and stands at a new starting line; the Dream Sharing Volunteer Group’s Engine Off, Green On tree-planting event, where JDC employees and Jeju residents planted a greener future one seedling at a time; and the environmental music theater Halmang Garden Beneath the Sea, which delivers a message of ocean conservation through the voices of young people. Like Gotjawal in June, these stories grow greener and deeper with the season. JDC is creating an international city where growth and coexistence are in harmony by generating new value for Jeju. As a public corporation under the Ministry of Land, Infrastructure and Transport, JDC will continue to enhance its core projects in tourism, education, healthcare, and advanced industries, while identifying new future-oriented initiatives to strengthen the foundation for Jeju’s continued growth.

Finding Answers on Site

JDC Executives Practice Hands-On Management

On May 6, 2026, JDC executives visited the sites of five key projects in a single day: Global Education City, Shinhwa World, Jeju Aerospace Museum, the Resort Residential Complex, and Healthcare Town.

The on-site visits were more than a routine inspection. They were a focused effort to address long-standing issues and lay the groundwork for JDC's next stage of growth. By moving beyond desk reports and going directly to the field, JDC took its first step toward finding practical answers on site.

JDC Key Project Sites

1 Global Education City

2 Shinwha World

3 Jeju Aerospace Museum

4 Resort Residential Complex

5 Healthcare Town

Addressing Issues on Site and Strengthening the Resolve to Move Forward

From 9:30 a.m. to 6:00 p.m. on May 6, JDC executives conducted a full-day visit to its key project sites. The visit was attended by the President, the Standing Auditor, the Head of the Future Investment Division, and non-standing directors, who toured [Global Education City, Shinwha World, Jeju Aerospace Museum, the Resort Residential Complex, and Healthcare Town](#) in sequence. The purpose was to review the issues facing each project site firsthand and discuss possible ways forward. The visit went beyond checking the progress of each project. It also provided an opportunity for the executives to exchange specific views on future priorities and strengthen their shared commitment to addressing pending issues.

1 Global Education City: Higher Enrollment and a New School Opening as Key Turning Points for Competitiveness

At Global Education City, the executives inspected [the planned site for the new international school, Fulton Science Academy Atherton \(FSAA\)](#), on plots H-13 and H-14. FSAA is planned as an integrated K-12 school, from kindergarten through elementary, middle, and high school, with 63 classes and a capacity of 1,354 students. It is scheduled to open in September 2028. The groundbreaking ceremony and construction notification were completed on April 28, and construction is now underway.

The executives emphasized the need for JDC and JEINS to make stronger efforts to attract students as competition with international schools in other regions continues to intensify. They also suggested that strategic promotional activities should be carried out in line with FSAA's opening schedule. In addition, they called for close attention to the remaining procedures needed to finalize the business transfer agreement for NLCS Jeju, as well as the prompt establishment of a clear project direction for the Phase 2 area, which has remained undeveloped for an extended period.

JEJU SHINHWA WORLD

SHINHWA WORLD LIMITED
신화월드주식회사 | 神话世界有限公司

Shinwha World:

Enhancing the Complex through Infrastructure Cost-Sharing and Progress in the J District

As of May 2026, development in Districts A, R, and H of Shinwha World had reached 64 percent of the planned progress, placing the project on a stable path. Of the 446,771 square meters of total floor area in Phase 1, three theme park zones, 1,720 hotel rooms, MICE facilities, a foreigner-only casino, and a water park are now in operation in District A. In District R, 721 condominium units, retail facilities, and leisure and cultural facilities have also been completed

and are operating normally. Investment is also progressing steadily, with 2.004 trillion won, or 57.5 percent of the total planned investment of 3.4835 trillion won, already executed.

The meeting focused on [ways to build on these achievements and further activate the complex as a whole](#). A key priority was the thorough maintenance of tourism complex infrastructure, along with the establishment of a reasonable system for sharing the related costs among resident companies.

The [J District development project](#), which JDC is carrying out directly, has also entered the full-scale implementation stage. Basic design for the J District was completed in September 2025, and the approval and permitting procedures for development project implementation are now being carried out in parallel with detailed design, both of which are scheduled to continue through November 2026. JDC plans to begin preparing the order for construction of Theme Park J in December 2026, with construction scheduled to begin in the first half of 2027 and completion and opening targeted for the first half of 2029.

At the meeting, participants emphasized the need to actively reflect advice from local experts so that the J District can fully embody the identity of “Jeju mythology.” They also noted the need to explore ways to create stronger links with the adjacent Jeju Aerospace Museum.

[Progress in coexistence with the local community](#) is also providing a solid foundation for the operation of the complex. As of December 2025, 1,568 of the 1,796 people employed at Myths and History Theme Park, or 87 percent, were Jeju residents. This shows that JDC’s principle of giving hiring priority to local residents is being implemented steadily on site. The meeting participants agreed that this local employment status should be reviewed and managed on a regular basis, and that the division of roles among the project entities in each district should be clarified to further strengthen cooperation with the local community.

〈Community Partnership at Shinwha World〉

Employment at Shinwha World

Seogwang Village Enterprise Co., Ltd.

Seogwang Village Enterprise Co., Ltd., a project implementation company established in April 2017 to promote cooperation among JDC, local residents, and investment companies, has also become a representative model for partnership. With 368 residents participating and 3.24 billion won in capital invested, the company had generated 10.8 billion won in revenue and created 193 jobs through laundry, housekeeping, and other support services as of December 2025. In doing so, it is helping establish a structure in which the complex and the village grow together.

With stable operations in Districts A, R, and H, the steady progress of the J District, and a partnership structure built on local employment and a village enterprise, Shinwha World is moving beyond the physical completion of the complex. It is becoming a stronger model for a tourism complex that grows together with the local community.

③ Jeju Aerospace Museum: Pursuing Operational Innovation to Balance Profitability and Public Value

At Jeju Aerospace Museum, discussions focused on ways to improve operations and address the museum's continuing deficits. The executives emphasized [the need to diversify revenue sources](#), including by developing signature content and creating linked tourism products in cooperation with Jeju Province. At the same time, they noted that efforts to improve profitability should be balanced with [the museum's core role in public education](#). They also supported stronger marketing efforts, including actively attracting group visitors ahead of the upcoming school trip season and Jeju's peak summer tourism season, as well as developing programs linked to JDC's major projects.

〈Jeju Aerospace Museum Operations〉

around **300,000**

Cumulative Participants
in Education, Hands-On Experience,
and Camp Programs as of 2025

250,531

These efforts to innovate the museum's operations build on [the solid achievements Jeju Aerospace Museum has made over the past 11 years.](#) Since opening in 2014, the museum had welcomed a total of 3,442,536 visitors as of December 2025, while maintaining an annual average of around 300,000 visitors over the past three years. A total of 238,886 people have taken part in its education, hands-on experience, and camp programs. Going forward, JDC plans to combine short-term measures to improve revenue, such as attracting group visitors and developing linked tourism products, with content innovation based on educational and hands-on programs and cooperative networks. Through these efforts, JDC aims to further develop Jeju Aerospace Museum into one of Jeju's leading centers for science and culture.

④ Resort Residential Complex: **Restarting Efforts to Normalize the Project**

At the Resort Residential Complex, where the project had been suspended for many years, JDC reviewed [measures to bring the project back on track](#). The Resort Residential Complex development project was suspended following a court ruling in March 2015 invalidating the land expropriation decision and another ruling in January 2019 invalidating the approval of the implementation plan for the recreation area. After the Supreme Court ruling invalidating the land expropriation decision, disputes arose over the land ownership that had served as the basis for the project. A total of 18 lawsuits, including ownership transfer suits, were filed by approximately 200 plaintiffs.

The prolonged dispute began to move toward resolution in December 2022, when the landowners submitted their opinion on a mediation proposal

〈Resort Residential Complex Land Compensation Progress〉

aimed at ending the dispute. JDC then established a proactive compensation plan with the goal of amicably resolving the land ownership dispute and fully recovering land ownership needed to restart the project. As a result, only three lawsuits remain pending: two ownership transfer registration cases involving two plaintiffs and one demolition case involving one plaintiff. All other cases, including ownership transfer suits filed by 197 plaintiffs, have been closed.

Land compensation is also moving forward steadily. As of the end of March 2026, agreements had been reached with 357 of the 485 landowners eligible for additional compensation, or approximately 74 percent. By area, 526,000 square meters of the total 670,000 square meters, or approximately 78.3 percent, had been secured. JDC plans to complete the additional compensation process in 2026 by securing 537,000 square meters, or 80 percent of the additional compensation area.

For any land that remains unsettled, JDC plans to proceed with compensation under the Act on Acquisition of and Compensation for Land, etc. for Public Works Projects after being designated as the project implementer, thereby completing full acquisition of the project site. After finalizing the master plan in June 2026, JDC plans to place orders in the second half of 2026 for follow-up services related to the development plan and various impact assessments. Based on these steps, JDC will formally begin the approval and permitting process, including a proposal for district designation. The long-stalled project is gradually moving toward a restart as JDC works to resolve two key issues: restoring land ownership and shifting the development approach.

⑤ Healthcare Town:

Bringing the Project Back on Track through Zone Division and Policy and Regulatory Improvements

Jeju Healthcare Town is a medical complex development project that brings together healthcare, tourism, and recreation. It is designed to [promote medical tourism and create a global integrated healthcare environment](#). The long-term project has been underway since 2008 and is scheduled to continue through 2029, with a total project cost of 1.5967 trillion won across a 1.539 million-square-meter site. Its 754,303 square meters of facility land will include Medical Street, a wellness mall, specialized hospitals, hotels, condominiums, and other facilities. As of the end of 2025, 866.7 billion won had been invested, representing 54 percent of the total planned investment.

The Healthcare Town project is currently moving forward on two tracks. On the investment attraction side, Greenland Group has purchased 364,396 square meters, or about 110,000 pyeong, accounting for 48 percent of the facility land, and is carrying out development. JDC is directly developing the remaining 389,907 square meters, or about 120,000 pyeong, which accounts for 52 percent of the facility land. After completing the Medical Service Center with its own funds in January 2022, JDC began moving the project forward in earnest by leasing and operating the center.

Greenland Holdings
development

48%

JDC direct
development

52%
(389,907m²)

Landscape of Healthcare Town

Based on this progress, the on-site review focused on ways to diversify the project's development strategy. Key topics included dividing the project area to support more efficient development and management of Healthcare Town, while also [pursuing policy and regulatory improvements](#) to address constraints related to recreation area development.

Going forward, JDC plans to create new momentum for the project by pursuing policy and regulatory improvements and reaching an agreement with Jeju Special Self-Governing Province on measures to bring the project back on track. After 19 years, Healthcare Town is preparing for its next stage as a global integrated medical tourism complex, using zone division and policy and regulatory improvements to move the project forward again. 🌊

24 Years of Progress, Standing at a New Starting Line

Commemorative Address
for JDC's 24th Anniversary

24

제주국제자유도시개발센터 창립 24주년 기념식

JDC 제주국제자유도시개발센터
Jinju International City Development Center

JDC

On May 14, JDC held a ceremony in the Grand Hall on the fourth floor of its headquarters to mark its 24th anniversary. The event offered an opportunity to look back on JDC's achievements and reaffirm its commitment to a new chapter of growth for a sustainable future for Jeju. At the ceremony, JDC President Song Seok-eon delivered a commemorative address outlining this renewed commitment.

On this day filled with the fresh sunlight of May, it is deeply meaningful to celebrate the 24th anniversary of our organization. Since its founding in 2002, JDC has pursued an ambitious vision of sharing the value of Jeju with the world. As we mark our 24th anniversary, I would like to express my sincere respect to all our employees for fulfilling your responsibilities with dedication in your respective roles. I would also like to take this opportunity to extend my deepest gratitude to the people of Jeju, who have always stood with us throughout our journey.

It has already been two months since I assumed the great responsibility of serving as the 10th President of JDC this past March. Although my time here has been brief, I have spent it visiting our project sites and seeing JDC's work up close. Each day, I am reminded of the important public role and responsibility entrusted to this organization. For the past 24 years, JDC has worked to turn Jeju's potential into real value. It has been a journey of challenge, persistence, and commitment. Now, building on that foundation, we must think carefully about how JDC can take on a more mature and meaningful role in the years ahead.

Dear members of the JDC family, Over the past 24 years, we have carried out major investments totaling approximately 8 trillion won, helping advance national policy and build the industrial foundation of Jeju's regional economy.

Global Education City has provided a high-quality international education environment and contributed to strengthening Korea's competitiveness in education. In particular, the recent groundbreaking of Fulton Science Academy Atherton (FSAA), the fifth international school to be established in Global Education City, is an important milestone. It shows that Jeju is continuing to grow as a hub for global education.

The Advanced Science and Technology Park has built a foundation for knowledge-based industries, led by companies in the IT and BT sectors. It has created jobs for local talent and helped expand Jeju's economy into technology-driven industries. **Shinwha World** has also become a strong model that combines large-scale infrastructure with community partnership. It has gone beyond the development of facilities to improve the quality of Jeju's tourism infrastructure, create significant employment, and contribute to the local economy.

These achievements were made possible by the dedication of our employees, who have worked steadily and quietly to resolve each challenge on the ground, one by one. But colleagues, we must also remember that the expectations placed on JDC are as serious as the achievements we have made.

As our projects have grown in scale, we must ask ourselves how deeply the people of Jeju, and the people of Korea as a whole, can actually feel the impact of what we have achieved. When I took office this past March, I emphasized two priorities to all of you: a sustainable future for Jeju, and results that the people of Jeju can see and feel. To deliver on that promise, we must go beyond simply managing performance indicators. We must focus all our efforts on urgent issues that are directly tied to public trust. In particular, bringing the Resort Residential Complex and Healthcare Town projects back on track is no longer something we can put off. It is a responsibility we must face. These long-stalled issues must be addressed head-on and brought back to a stable path forward. That, I believe, is our duty to the people of Jeju.

We must take the lead in working with relevant agencies,  cut through the issues that have become tangled, and do everything we can to produce **real results that the people of Jeju can understand and accept.**

Dear members of the JDC family, As we gather today to mark JDC's 24th anniversary, I would like to share three priorities that we must work on together in the years ahead. First, we will build **a foundation for the future** and secure new drivers of sustainable growth. As AI continues to transform our world, we will strengthen public-private collaboration and bring technology-based innovation into every part of our work to make our organization more efficient. We will also move ahead in building the infrastructure Jeju needs to become a hub for emerging industries. Second, we will **strengthen project management** and improve the quality of the infrastructure that supports Jeju as an international city. We will ensure that new international schools open as planned and continue improving the global education environment. At the same time, we will move long-stalled projects forward and expand infrastructure for culture, recreation, healthcare, and other integrated complexes.

Through these efforts, we will help advance Jeju's tourism industry and deliver results that local residents can see and feel. Third, we will build greater public trust through **open communication and responsible management.** We will strengthen regular communication with the government and related agencies.

We will also work to revitalize our designated duty-free shops, which serve as one of JDC's key points of contact with the public. To do so, we will pursue policy and regulatory improvements, strengthen brand competitiveness, and upgrade service operations. At the same time, we will make **zero safety accidents** across all our worksites our highest management priority. By creating an environment where both employees and visitors can feel safe, we will make JDC an organization that earns the public's trust. Dear members of the JDC family, It is you who will turn this vision into reality. I hope today's ceremony will give us an opportunity to reaffirm the direction ahead and renew our shared commitment. **Let us move forward together until JDC becomes a source of pride for the people of Jeju and for Korea, and stands as a trusted global partner connected with the world.**

May 2026

Song Seok-eon, President, JDC

④ Resort Residential Complex: **Restarting Efforts to Normalize the Project**

At the Resort Residential Complex, where the project had been suspended for many years, JDC reviewed [measures to bring the project back on track](#). The Resort Residential Complex development project was suspended following a court ruling in March 2015 invalidating the land expropriation decision and another ruling in January 2019 invalidating the approval of the implementation plan for the recreation area. After the Supreme Court ruling invalidating the land expropriation decision, disputes arose over the land ownership that had served as the basis for the project. A total of 18 lawsuits, including ownership transfer suits, were filed by approximately 200 plaintiffs.

The prolonged dispute began to move toward resolution in December 2022, when the landowners submitted their opinion on a mediation proposal

On May 8, Jeju Advanced Science and Technology Park was filled with a warm sense of energy and community. The day began with a ceremony marking the 13th anniversary of the JDC Labor Union and continued with a safety culture campaign and a charity market booth organized by employees. It was a meaningful occasion for labor and management to come together and reaffirm the values of unity, safety, and shared growth.

↑ Joint Labor-Management Safety Culture Campaign

Thirteen Years Together, Taking the Next Step

At 9:40 a.m., the ceremony marking the 13th anniversary of the JDC Labor Union began in the large conference room on the fourth floor of the Elite Building. The ceremony opened with the entrance of the union flag and a labor ceremony, followed by the presentation of joint labor-management scholarships, commendations, commemorative remarks, and congratulatory performances.

The event brought together all JDC employees, including both union members and non-members. It offered an opportunity to look back on the union's 13-year history and strengthen unity across the organization. After the ceremony, employees shared lunch before moving on to the joint labor-management workshop in the afternoon.

VR Workplace Accident Simulation

Labor and Management United for a Safer Workplace

At 12:30 p.m., the workshop began with the 2026 JDC Joint Labor-Management Safety Culture Campaign, held at Neighborhood Park No. 4 in Jeju Advanced Science and Technology Park. The SAFE-TEA campaign, joined by both the JDC President and the Labor Union Chair, was designed to show employees that labor and management are working together to promote a stronger safety culture.

Safety culture booths were set up throughout the park, offering hands-on experience with safety equipment and distributing occupational safety and health manuals. The VR workplace accident simulation drew especially strong interest from employees. Using immersive content, the program helped participants recognize hazardous situations in advance and build their response skills, giving them a more practical understanding of workplace safety.

↑
JDC Interns Booth: Enjoy a Bite, Give Back

In a satisfaction survey of 50 employees who took part in the VR experience, the program received an average score of 4.94 out of 5. The campaign earned strong ratings across all categories, from overall satisfaction to its contribution to improving safety awareness, reaffirming the potential of joint labor-management efforts to build a stronger safety culture.

A Small Booth with a Big Spirit of Giving

On one side of the workshop, the JDC Interns Booth, run by employees themselves, drew steady interest from JDC staff. The booth was planned by Kim Minhee of the PR and Marketing Team, Moon Hyebyeong of the Advanced Technology Operations Team, Jo Yejin of the Legal Management Team, and Choi Saebom of the Community Partnership Team.

It served fruit ade made with Jeju-grown lemons and green tangerines, along with warm eomuk tang, a Korean fish cake soup prepared on site, and a variety of snacks.

At the front of the booth stood a large transparent donation jar, along with a sign announcing that all proceeds would be donated.

Once employees learned that each drink and each bowl of eomuk-tang would contribute to a good cause, more and more people stopped by to take part. Senior colleagues from the Communications and Public Affairs Office also helped attract visitors and manage the booth, showing strong teamwork across departments. The booth raised a total of 1.1 million won, all of which was donated to Jejuwon, a children's home in Jeju. What began as a small employee-run booth became a meaningful act of giving.

Mini Interview #1

Kim Minhee

PR and Marketing Team,
Communications and
Public Affairs Office

For this joint labor-management workshop, I was in charge of the administrative side of the booth. I started by submitting the application to run the booth, and then handled the cost estimates and budget for the entire menu, including the ade, eomuk, snacks, and other items. Since our goal was to donate all proceeds, I paid close attention to keeping everything transparent, down to the last won. On the day of the event, I also calculated and managed the sales from the booth, helping make sure that the full 1.1 million won raised was safely collected.

To be honest, the booth and the donation results were not something I could have achieved on my own. They were possible because everyone in the Communications and Public Affairs Office came together to help. From the moment we interns first proposed the idea, our office head and manager gave us practical advice and strong support. Our deputy manager also stepped in as if it were her own project, and our assistant manager and senior staff came by the booth to help out and cheer us on.

Preparing all the snacks and drinks was not easy, but thanks to everyone who encouraged us and told us to keep going because it was for a good cause, we were able to finish the event with energy and joy.

I think the money we raised means more than just the amount itself. It reflects the care of local farmers and the warm support of JDC employees, all brought together in one place. If that support reaches the children at Jejuwon and helps them grow a little brighter and healthier, even in a small way, then all the effort that went into this will feel more than worthwhile. Through this experience, I learned how a sincere idea and hard work can turn into something meaningful for the local community. I would like to sincerely thank all JDC employees who supported us and joined us in making this donation possible.

Mini Interview #2

Jo Yejin

Legal Management Team,
Legal and Compliance Office

I was in charge of planning and operating the booth at the joint labor-management workshop. I'm happy that our idea of using local produce and giving back to the community led to such a good result. The part I paid the most attention to was finding where to make the donation. I remember looking into several organizations, checking how donations were used, and learning about their facilities.

At first, we started the booth without thinking too much of it, but as the event got closer, I began to feel the pressure of preparing everything. The day before the event, I went shopping with my fellow interns. Every time we picked up an ingredient, we talked about the price and why we should choose it, so we ended up spending about four hours shopping. By then, we were tired and hungry, and honestly, I think I even wondered for a moment why we had decided to do this.

But after buying everything, we had a late dinner together and talked about how we hoped to sell a lot the next day so we could donate more to a good cause. We encouraged one another and decided to give it our best. Now that the booth has ended successfully, even the difficult parts feel rewarding.

Mini Interview #1

Kim Minhee

PR and Marketing Team,
Communications and
Public Affairs Office

For this joint labor-management workshop, I was in charge of the administrative side of the booth. I started by submitting the application to run the booth, and then handled the cost estimates and budget for the entire menu, including the ade, eomuk, snacks, and other items. Since our goal was to donate all proceeds, I paid close attention to keeping everything transparent, down to the last won. On the day of the event, I also calculated and managed the sales from the booth, helping make sure that the full 1.1 million won raised was safely collected.

To be honest, the booth and the donation results were not something I could have achieved on my own. They were possible because everyone in the Communications and Public Affairs Office came together to help. From the moment we interns first proposed the idea, our office head and manager gave us practical advice and strong support. Our deputy manager also stepped in as if it were her own project, and our assistant manager and senior staff came by the booth to help out and cheer us on.

After reading the sign at the booth, many people gladly took part, saying things like, “It tastes good, and it’s for a good cause, so it’s worth every won.” Some people chose not to take their change and asked us to donate it to the children. Others made donations and even brought snacks for us instead.

Colleagues from other departments also stopped by and encouraged us, saying it was the first time they had seen interns plan and run a booth like this. Their support gave us the energy to keep going until the end. Even after the event, I heard people were talking about how proud they were of us, and that made me feel very grateful. Thanks to the strong support from the Communications and Public Affairs Office and all JDC employees, we were able to raise 1.1 million won. As a member of the Community Partnership Team, it was an incredibly rewarding and meaningful experience.

Mini Interview #4

Moon Hyegyeong

Advanced Technology
Operations Team,
Advanced Technology
Operations Office

At the Enjoy a Bite, Give Back booth, I was in charge of quality and resource management. I helped keep the ingredients fresh from the preparation stage and handled the washing, prep work, and cooking. I also checked our inventory in real time to reduce waste and keep the food quality consistent, so the booth could run smoothly. On top of that, I helped bring people in so that more JDC employees would stop by.

Working with limited time and resources, I was able to plan the booth concept, put it into action, and build my problem-solving skills along the way. We had more visitors than expected, but I was proud that our team divided up the work and finished the event without any major issues. Running the booth also gave me a natural chance to talk with colleagues from other departments whom I do not usually work with, and I think it became a great opportunity to build a stronger sense of connection within the organization. 🌊

Giving Abandoned Bicycles a New Start

Fixycle, a Student Club Launched in Global Education City

In Global Education City, a group of students noticed bicycles that had been left unused for a long time and decided to do something about it. Fixycle is a student-led club that repairs abandoned bicycles, shares them with others, and puts them back on the road. What began as a simple question from students growing up in JDC's Global Education City is now creating meaningful change, contributing to resource circulation and stronger ties with the local community.

A Question That Began with Abandoned Bicycles

Fixycle began in March 2024 in a corner of a classroom provided by an engineering teacher at Korea International School Jeju (KISJ). It started with a simple idea from students who noticed bicycles left unclaimed around Global Education City: repair them and make them usable again. The bicycles, some with flat tires and rusted frames, had been sitting in the same places for a long time. With the students' work, they began coming back to life, one by one.

What began at one school soon grew into a joint student club with members from several schools, including St. Johnsbury Academy Jeju and Jeju Foreign Language High School. Today, Fixycle has 26 student members. Through bicycles, students from both inside and outside Global Education City are coming together naturally and building a new kind of community that crosses school and nationality.

〈Fixycle's Four Areas of Activity〉

Collection

- Bicycle donation campaigns at schools and apartment complexes

Repair

- On-campus repair services
- 'Our Neighborhood Free Bicycle Repair Day'

Return

- Donating proceeds from flea markets and bazaars
- Regular bicycle donations for Cambodian students

Campaigns

- Bicycle commute campaigns
- Stone-picking activities
- Elementary school bicycle education volunteer work

From Collection to Repair to Giving Back

Fixycle's work follows a cycle built around bicycles: collection, repair, and giving back. Students receive donated bicycles that are no longer used at schools and apartment complexes, creating a foundation for resource circulation. Through collection campaigns held at three apartment complexes in Global Education City - Hanshin, Hanwha, and Haedong - the students collected and cleared about 300 abandoned bicycles. The effort also helped improve the environment of the residential complexes.

Once collected, the bicycles are repaired and made ready to ride again. With help from professional bicycle mechanics, the students regularly learn and carry out hands-on maintenance, including replacing chains, adjusting brakes, removing rust, and replacing cables. They also operate an on-campus bicycle repair service.

Through Our Neighborhood Free Bicycle Repair Day, run in partnership with the Jeju Suneuleum Local Self-Sufficiency Center and Jejuin Social Cooperative, Fixycle has repaired well over 100 bicycles for local residents. The program has also received strong feedback from foreign residents.

Repaired bicycles are sold at affordable prices at flea markets, school bazaars, and local festivals such as the Chusa Culture and Arts Festival. After the cost of parts is covered, the proceeds are donated to local welfare facilities and people with limited access to transportation.

Our Neighborhood Free Bicycle Repair Day

Fixycle also regularly donates bicycles to students in Cambodia who live too far from school to commute on foot.

Hondi Dalli, Gachi Salli

Fixycle's work also extends to the environment and local bicycle infrastructure. During Earth Day week in April 2025 and April 2026, about 1,000 students from two schools took part in the Bicycle Commute Campaign by riding their bicycles to school. The campaign reduced carbon emissions by an estimated 500 kilograms, which is roughly equivalent to planting 20 trees.

Fixycle members also take part in a range of related activities. These include picking up stones and other hazards from bicycle paths, volunteering in elementary school bicycle education programs run by Jeju Bicycle School under Pureun Bike Sharing, and assisting foreign cycling tourists with interpretation.

↑
MOU Signing

When the students found that bicycle lanes had not been included in the plan for the second access road to Global Education City, they also launched a resident participation campaign to call for the installation of bicycle lanes.

Fixycle has signed MOUs with the Jeju Suneuleum Local Self-Sufficiency Center, Jejuin Social Cooperative, and Pureun Bike Sharing. Together, they are carrying out bicycle promotion activities under the name Hondi Dalli, Gachi Salli Jeju. In Jeju dialect, hondi means together, while dalli refers to moving forward by bicycle. Gachi suggests both value and togetherness, and salli means to bring something back to life. The name reflects a shared commitment to creating value together and protecting the environment.

What began with a small turn of a pedal in Global Education City is now becoming a broader movement across Jeju. 🌿

Jang Yoon-woo

Lead Representative,
Fixycle Alliance Team
Grade 10, KISJ

Currently, my friends and I are running bicycle repair volunteer activities, planning campaigns, and working with the local

community. For me, Fixycle is not just about fixing bicycles. I want it to be a way to reconnect resources that would otherwise be thrown away with people who can use them again.

I have loved bicycles since I was young. I used to stop by a neighborhood bike shop just to look at the bikes and help with repairs. But after moving to Jeju, I had a lot of trouble because my bicycle often broke down due to road conditions, and there were not many bike shops where I could get it repaired.

Then I found out that older students at my school had started a group to fix bicycles themselves and help local residents. I thought it was meaningful that I could help someone through something I loved, so I naturally joined Fixycle.

Elementary School Bicycle Safety Education Volunteer Program

One moment I remember clearly was when I came across the first two-wheeled bicycle I had picked out for my younger sister through Fixycle. I was really happy to see it again. At the last free repair day, I tried to fix it, but we were missing one part, so I could not finish it. A local resident told me, “If you fix it, I definitely want to buy it.” I want to finish it soon and contact that person.

I also hope Fixycle’s work can lead to better bicycle roads and cycling infrastructure. I hope more people will come to Jeju not just for quick, fast-paced travel, but to stay longer, slow down, and experience the island in a more meaningful way.

↑
JDC Interns Booth: Enjoy a Bite, Give Back

In a satisfaction survey of 50 employees who took part in the VR experience, the program received an average score of 4.94 out of 5. The campaign earned strong ratings across all categories, from overall satisfaction to its contribution to improving safety awareness, reaffirming the potential of joint labor-management efforts to build a stronger safety culture.

A Small Booth with a Big Spirit of Giving

On one side of the workshop, the JDC Interns Booth, run by employees themselves, drew steady interest from JDC staff. The booth was planned by Kim Minhee of the PR and Marketing Team, Moon Hyebyeong of the Advanced Technology Operations Team, Jo Yejin of the Legal Management Team, and Choi Saebom of the Community Partnership Team.

Lee Jaewon

Vice President,
Fixycle Alliance Team
Grade 10, KISJ

When I was in second grade, my grandfather changed the saddle on my bicycle to a softer one and rode with me. I still clearly remember the hotteok we ate together that day. After he passed away, the bicycle became too small for me, but I still could not throw it away. I just kept it there.

I can no longer ride with my grandfather, but I think I will remember that road even when I grow up. I still love bicycles. On weekends, I sometimes ride mountain bikes on Hallasan, and I also take part in MTB competitions on the mainland.

At an urban forum I attended, a professor once said that bicycles are a democratic and equal form of transportation. That made me think differently about what we do at Fixycle. Repairing bicycles so people can ride them together is not only an eco-friendly activity. It also makes us think about the right to safe mobility and how road space should be shared.

Cha Yeni

Vice President,
Fixycle Alliance Team
Grade 10, KISJ

At first, I thought Fixycle was meaningful mainly because it helped the environment by repairing broken or abandoned bicycles and putting them back to use. But after taking part in the process of repairing, selling, and donating bicycles to people who need them, I realized that one bicycle can make it easier for someone to get to school or get around, and can even help reduce their financial burden.

What I found most meaningful was being able to interact with people directly. I talked with people who brought in their bicycles for repair, and when I saw how happy they were after the repairs were done, I felt that what I was doing was actually helping someone.

At one Free Repair Day, an international student stayed at the site from the beginning to the end, spending time with friends and enjoying the activities. Seeing that made me realize that the Free Repair Day, which we hold twice a year, is also an opportunity to connect with local residents.

Through Fixycle, I want to do more than repair broken bicycles. I want to help create a cycle where people use bicycles longer, find new value in things that might otherwise be thrown away, and connect those things with people who need them. Ultimately, I hope Fixycle becomes more than a one-time event. I want it to become a lasting movement that people trust and look forward to. I want to help build a culture where the small act of repairing a bicycle leads to greater sharing and more sustainable practices.

Ongoing Bicycle Donations for Students in Cambodia

After reading the sign at the booth, many people gladly took part, saying things like, “It tastes good, and it’s for a good cause, so it’s worth every won.” Some people chose not to take their change and asked us to donate it to the children. Others made donations and even brought snacks for us instead.

Colleagues from other departments also stopped by and encouraged us, saying it was the first time they had seen interns plan and run a booth like this. Their support gave us the energy to keep going until the end. Even after the event, I heard people were talking about how proud they were of us, and that made me feel very grateful. Thanks to the strong support from the Communications and Public Affairs Office and all JDC employees, we were able to raise 1.1 million won. As a member of the Community Partnership Team, it was an incredibly rewarding and meaningful experience.

J · E S T I N A

Where 70 Cars Stopped,
70 Trees Took Root

JDC Dream Sharing Volunteer Corps:
Engine Off, Green On

On April 28, 2026, JDC employees and volunteers from Jeju Forest for Life gathered in the plaza in front of Yusuam Light Park in Aewol-eup, Jeju City. The event was part of Engine Off, Green On, a company-wide initiative by the JDC Dream Sharing Volunteer Corps to plant trees in line with the carbon emissions reduced by driving less. Each young tree planted that day carried the employees' shared commitment to climate action.

One Car Off the Road, One Tree in the Ground

In line with the government's climate action and carbon neutrality policies, JDC has been carrying out ESG activities that employees can take part in directly. Engine Off, Green On was organized as a company-wide initiative in this effort. To show its support for the alternate-day driving system for public institutions, JDC linked reductions in vehicle use to tree planting. Based on the 70 vehicles used by JDC each day, the initiative took shape as the planting of 70 Hinoki cypress seedlings. The simple idea of planting one tree for every car taken off the road became a clear symbol of carbon neutrality in action.

At 9:30 a.m. on April 28, 2026, 19 JDC employees and 11 volunteers from Jeju Forest for Life gathered in the plaza in front of Yusuam Light Park on Yusuam Pyeonghwa 2-gil in Aewol-eup, Jeju City. The tree-planting activity, carried out in partnership with Jeju Forest for Life, continued until 6:00 p.m. By the end of the day, 70 Hinoki cypress seedlings had been carefully planted, turning JDC's commitment to reducing vehicle use into a visible act of climate action.

Public and Private Partners Working Together for Carbon Neutrality

The initiative gained stronger support through JDC's partnership with Jeju Forest for Life. JDC encouraged voluntary participation among its employees, while Jeju Forest for Life provided tree-planting expertise and helped manage on-site operations.

The activity was covered by eight media outlets and drew attention as an example of public-private cooperation in putting carbon neutrality into practice.

The JDC Dream Sharing Volunteer Corps will continue its work beyond the April tree-planting event. In May, in observance of Family Month, the group plans to provide food support for elderly residents living alone. From environmental action to social support, and from employees to the wider community, JDC's spirit of giving continues to expand step by step. Just as one tree was planted for every car taken off the road, JDC's efforts are taking root in Jeju as small but meaningful change. 🌱

Seolmundae Halmang's Sea Garden
Comes to Life on Stage

바닷아래 HALMANG'S GARDEN 할망정원

Youth Environmental Music Theater
Halmang's Garden,
Supported by JDC's
Community Support Program

Halmang's Garden, a youth environmental music theater production staged by the Jeju Opera Research Institute with support from JDC's Community Support Program, invites children and young people to engage with the challenges facing Jeju's marine environment through music and storytelling. Halmang means grandmother in the Jeju dialect, but in this mythic context it refers to Seolmundae Halmang, a legendary giant goddess said to have created Jeju Island. The story follows a sea turtle searching for the "seed of life" she left behind before entering her eternal sleep, encouraging young audiences to see themselves as part of the solution.

An Environmental Message Rooted in Jeju Mythology

Halmang's Garden, presented as part of the 2026 Clean Ocean with JDC initiative, opened on April 25 at the Jeju BeIN; performance hall. An original environmental music theater production, it connects the myth of Seolmundae Halmang with a message about protecting the environment. In the title, *badang arae*, meaning beneath the sea in Jeju dialect, refers to the underwater world we cannot see and the life within it.

Halmang's garden symbolizes the sea around Jeju as a living place that sustains life. Rooted in Jeju's language and sensibility, the title brings together local identity, culture, and environmental values. The performance tells a fable-like story of Jeju's sea facing a crisis caused by human waste and pollution. At a time when climate change and plastic marine debris threaten Jeju's marine ecosystem and even the livelihoods of haenyeo, the production uses music and storytelling to deliver an environmental message in a way that young audiences can connect with. Rather than presenting environmental education in a rigid way, the production aims to nurture environmental awareness through story, music, and the emotional impact of the stage.

A Sea Turtle's Journey in Search of the Seed of Life

The story begins in the increasingly polluted waters of Jeju. In a restricted area filled with marine debris, schools of fish swim about noisily, unaware of the danger as they feed on contaminated food.

A sea turtle rushes in to warn them, but the fish do not listen. Just then, a loud rumble shakes the sea as an underwater earthquake occurs. A shark, the spirit of the sea, appears and leads everyone to safety. The shark spirit tells the shocked turtle that waste piled up on land is raising the temperature of the sea, disturbing the ocean's geological balance. The only remaining hope, the shark explains, is the seed of life left behind long ago by Seolmundae Halmang before her eternal sleep.

In search of that hope, the turtle heads into the deep sea. There, a wise seahorse teacher tells the turtle about a mysterious place called Halmang's Garden, where the seed of life is hidden. The seahorse also explains that only the spirit of the forest knows where the garden can be found. The turtle eventually leaves the sea and sets out for land to find the forest spirit. Along the way, the turtle encounters beings it has never known before and experiences many trials and wonders in a new world.

The performance follows the turtle's journey through ten original songs, beginning with "Into the Another World" and continuing with "The Legend of Halmang's Garden," "Morning Song of the Forest Spirits," "Survival Strategy," "Clean House," "Let Me Introduce My House Butler," "My Reflection," "Garden of Goddess," "Ultimatum," and "Ending." Through music and storytelling, the production draws the audience into the turtle's search for the seed of life.

Culture and Talent Nurtured by JDC's Community Support Program

With backing from JDC's Community Support Program, the production brought together local youth and artists, creating a collaborative stage that also helped identify and nurture future talent in the arts.

The production was overseen by Oh Neunghui, Director of the Jeju Opera Research Institute, and directed by Lee Beomno, who has led numerous opera productions.

The creative and production team included Kim Gyeongtaek, who wrote the music and script; music coach Lee Miji; Park Miso for MR and mastering; Kang Gyeongho for video; Kang Changjun for planning; Kim Hotaek for sound; Park Seonmi for costumes; and Heo Yeongmi for makeup. The cast featured elementary and middle school students from Jeju, including Lee Soyul, a sixth grader at Jeju Samhwa Elementary School, in the lead role of the sea turtle; Jeon Yeju as the cat; Yang Sehyeon as the seahorse and heron; and Seo Yejun as the blue-ringed octopus. Local artists also joined the stage, including bass Ko Seungbo, a standing member of the Jeju Provincial Seogwipo Choir, as the shark spirit, and Lee Rutyeongsil as the grandmother. Together, the young performers and local artists added meaning to the production as a collaborative work rooted in the community.

Presented in a musical format designed for young audiences, the approximately 70-minute performance was staged twice, at 3:00 p.m. and 6:00 p.m., with free admission on a first-come, first-served basis. Bringing together environment, culture, and education, the production showed once again how JDC's Community Support Program can support community-led responses to local issues while also strengthening the value of culture and the arts. The journey of one sea turtle, which began in Seolmundae Halmang's garden beneath the sea, led to a broader call to protect Jeju's ocean. 🐡

Protect Your Technology, Build Trust

Technology Data Escrow with JDC

Technology is one of the most important assets a company owns. Yet protecting technology developed through years of effort is not always easy. Companies may be asked to provide key technical data during business transactions, or they may worry about possible technology leaks in the course of collaboration. The Technology Data Escrow System was created to help prevent these risks and support fair business practices.

What Is the Technology Data Escrow System?

Escrow means placing important materials in the custody of a trusted institution for safekeeping. The Technology Data Escrow System allows companies to securely deposit key technical data and trade secrets with a reliable escrow institution. It helps protect their technology and provides objective evidence of when and in what form the technology was developed and held.

The system is operated under Article 24-2 of the Act on the Promotion of Mutually Beneficial Cooperation Between Large Enterprises and Small and Medium Enterprises. Its main purpose is to prevent unfair misappropriation or unauthorized use of technology that may arise in business relationships, while helping create fair business practices. In practical terms, a company deposits its key technical data with an accredited institution. If a technology-related dispute arises later, the company can use the escrow record to objectively prove when and in what form it developed and held the technology.

This system is especially useful for small and medium-sized enterprises and startups, which often need to explain their technology or provide technical materials during business transactions. By using technology data escrow in advance, companies can objectively prove that they hold the technology and create a safer environment for doing business.

How Is It Different from a Patent?

When companies think about protecting technology, patents are often the first option that comes to mind. Patents are, of course, an important form of intellectual property protection, but not all technologies are protected through patents. In practice, many companies hesitate to file patent applications for reasons such as the following:

- Their core technology may be disclosed during the patent publication process.
- They may be concerned that competitors could file imitation patents.
- Maintaining the technology as a trade secret may be more advantageous than filing a patent.
- The technology may still be under development, making public disclosure burdensome.

A patent grants exclusive rights for a certain period of time, but it requires disclosure of the technical details. Technology data escrow, by contrast, protects key technical data and trade secrets without external disclosure. This is what makes it different from patent protection.

A Wide Range of Eligible Materials

When people hear technology data escrow, they may think only of patented technologies or design drawings. In practice, however, the scope of materials that can be deposited is much broader.

Under the Technology Data Escrow System, companies may deposit technical and business information they wish to protect as trade secrets, as well as other intellectual property-related information useful for business operations.

■ Technical Information

Production and manufacturing methods | Material composition ratios and ingredient lists | Design drawings and manuals | Research and development reports | Experimental data and analysis materials | Software source code | Data and digital content

■ Business Information

Financial and accounting materials | Personnel and labor-related documents | Marketing strategy materials | Production and operations management documents | Client and cost-related information | Internal reports and operating manuals

One key advantage of technology data escrow is that materials do not need to involve highly advanced technology or meet the level required for patent protection. Technologies that may be difficult to patent, minor trade secrets, failed designs, and materials still at the idea stage can also be deposited.

Five Advantages of the Technology Data Escrow System

The Technology Data Escrow

System is more than a way to store materials. It offers a range of practical benefits that help companies protect core technology and support continued growth.

1. Long-Term Confidentiality

Deposited materials are not disclosed to the public and are accessible only to the depositor and users authorized to receive them. Unlike patents, which require disclosure of the technology and become public after the protection period expires, technology data escrow helps companies maintain their technological competitiveness over the long term.

2. Stable Access to Technology

Even if the company that developed the technology goes bankrupt or closes its business, the user company can receive the deposited materials under pre-agreed conditions and continue operating its production lines.

3. Broad Scope of Protection

The system can protect not only technologies that meet the level required for patent protection, but also trade secrets, materials at the idea stage, and failed designs. In other words, most information related to a company's competitiveness may be eligible for protection.

4. Prevention of Technology Loss

If unexpected issues such as system errors or data loss occur, deposited materials can be recovered and used again. This helps reduce the risk of losing technology that has already been developed.

5. Prevention of Technology Leaks and Support in Disputes

Technology data escrow can provide objective evidence that the technology was developed, making it useful in responding to future technology disputes. The fact that the materials have been deposited also shows the company's commitment to protecting its technology, which may help prevent leaks by employees or outside parties.

Bilateral and Trilateral Agreements: What Is the Difference?

Technology data escrow agreements may be structured as either bilateral or trilateral agreements.

■ Bilateral Agreement

A bilateral agreement is signed between the company that owns the technology and the Technology Escrow Center. Its purpose is to securely store technical materials and provide objective proof that the technology was developed.

■ Trilateral Agreement

A trilateral agreement is signed among the company that owns the technology, the company that uses the technology, and the Technology Escrow Center.

Under a trilateral agreement, if the company that owns the technology goes bankrupt, closes its business, or faces another agreed release event, the company that uses the technology may receive and use the deposited materials under the release conditions agreed in advance.

How Much Does Escrow Cost?

The fee for a new technology data escrow deposit is approximately 300,000 won per year. The following companies may be eligible for a one-third reduction in the fee:

- Companies holding national core technologies
- Startups and venture businesses
- Technology- and management-innovative SMEs

Major institutions that provide technology data escrow services include:

- Technology Escrow Center, Korea Foundation for Cooperation of Large & Small Business, Rural Affairs
- Tech Safe, Korea Technology Finance Corporation (KOTEC)
- Korea Copyright Commission, for software

JDC Supports Technology Escrow

JDC recognizes the importance of protecting technical data as part of its efforts to promote fair business practices and strengthen mutually beneficial cooperation. JDC currently covers the full cost of escrow not only for technologies developed and used through commissioned transactions involving JDC, but also for technologies held by companies located in the Advanced Science and Technology Park or by JDC's partner companies, if they wish to use the escrow system. This support goes beyond covering costs. It is part of JDC's broader effort to help companies protect their core assets and strengthen their technological competitiveness.

Jeju is seeing growth in a range of emerging industries, including AI, digital content, biotechnology, and energy. As these industries continue to develop, protecting technical data is becoming increasingly important. In this environment, the Technology Data Escrow System can serve as an important safeguard, helping companies develop and commercialize their technologies with greater confidence. JDC will continue working to build an industrial ecosystem where companies located in its business complexes and its partner companies can develop technologies and grow with confidence. Your company's valuable technology deserves protection. Start protecting it today.

For inquiries about JDC's technology data escrow support, please contact the Community Partnership Team officer in charge of shared growth at  **064-797-5741.**

JDC NEWS & TOPICS

MOU Signed to Launch the 2026 Jeum Iljari Employment Program — JDC, Korea Labor Force Development Institute for the Aged, and Korea Labor Foundation Strengthen Cooperation to Advance a Jeju Employment Model

On May 12, JDC held an MOU signing ceremony at the JDC Elite Building with the Korea Labor Force Development Institute for the Aged, led by President Kim Suyeong, and the Korea Labor Foundation, led by Secretary General Park Jongpil, to launch the 11th JDC Jeum Iljari Employment Program.

Through the agreement, the three organizations will strengthen their existing partnership and work together to further develop a Jeju-specific employment model based on each organization's role and expertise.

The JDC Jeum Iljari Employment Program is one of JDC's flagship community partnership job programs. Launched in 2018, the program connects the experience and capabilities of new seniors and middle-aged adults with efforts to address local issues in Jeju and create social value.

2026 JDC Community Support Program Opens Call for Nonprofit Organizations — Seeking Public Interest Projects to Support Jeju’s Internationalization and Improve the Living Environment for International Residents

JDC is accepting applications for the nonprofit organization category of its 2026 JDC Community Support Program through June 11. The open call is designed to identify and support creative and innovative public interest projects that contribute to Jeju’s internationalization, including efforts to create a better living environment for international residents.

Project proposals may be submitted in four areas: [Community], [Language and Information], [Education] and [Local Economy]. strengthening the foundation for bringing local content to global audiences. Applicants may propose a wide range of projects that support Jeju’s internationalization and help create a more globally inclusive living environment.

Eligible applicants are nonprofit organizations located in Jeju Special Self-Governing Province that have been established for at least one year and have a track record of activities in the relevant support area. Funding is available up to 50 million won per project. However, the applicant organization must cover at least 10 percent of the total project cost with its own funds.

Organizations interested in applying may submit their applications through the JDC website by 6:00 p.m. on Thursday, June 11.

Reader Feedback

Dream of Jeju May 2026 Issue

Dream of Jeju
May issue

Click!

Hong *Pyo

Every time I read Dream of Jeju, I always think the cover is beautiful. I moved to Jeju not long ago, and the covers have inspired me to visit the beautiful places featured in each issue. I hope you will continue to feature more of Jeju’s beautiful spots on the cover.

Lee *Sin

The poem at the beginning of the issue was quietly moving. Paired with the photographs, it made the magazine stay with me even longer.

Lee *Im

8p

I was glad to get a clear look at JDC’s plans for a cleaner Jeju through JDC Vision Wave. To everyone working toward the goal of 100 percent renewable energy, thank you for helping protect Jeju’s clean environment. I hope you will stay true to the commitment shared in the article, and I’ll be cheering you on.

Kim *Seok

As the world moves faster toward carbon neutrality and wider use of renewable energy, I thought it was very timely for JDC to establish its mid- to long-term RE100 implementation strategy, with a goal of using 100 percent renewable energy by 2035. I hope JDC will continue to take the lead in fulfilling its social responsibility as a public institution.

Park *Seok

18p

I was very glad to read the article about Jeju Aerospace Museum. It was impressive to see the museum becoming an open cultural space that everyone can enjoy. I think the sign language interpretation videos for exhibitions and the real-time multilingual communication service will be especially helpful for visitors. I also look forward to seeing the museum strengthen its content through its partnership with the Asia Culture Center Foundation.

Byeon *Hee

Every month, the seasonal cover photo makes me want to book a flight to Jeju right away. As a mother raising a young son, I found the article on Jeju Aerospace Museum especially interesting. I am already excited to show my child the airplanes, so I plan to add it to our itinerary for our next trip to Jeju.

Kim *Gyeong

24p

I was very glad to read the news about the groundbreaking of Fulton Science Academy Atherton. I hope Jeju Global Education City will complete its international school cluster and take another step forward as a leading global education hub in Asia.

Shin *Won

32p

I was glad to see Fresh, one of my favorite brands, featured in this issue. It was great to learn that it is available at Jeju Duty-Free. The grapefruit fragrance and body cleanser have a citrus scent that feels perfect for the summer season. If you like citrus scents, I would definitely recommend trying them.

Jang *Seon

38p

Reading about children with developmental disabilities and their families taking part together, restoring balance in both body and mind, and connecting through a single round GoodBall was truly beautiful.

Lee *Ri

I thought the community program for families of children with developmental disabilities was very meaningful. I was grateful to read that it has already been held 27 times since last fall. When I think about the challenges families with disabilities often face, I am especially moved that JDC is supporting such a warm and meaningful program.

Yang *Ran

46p

Just like the phrase “where petals dance and spring whispers,” the warm feeling of spring in Jeju really came through. The scenery of yellow canola flowers and cherry blossoms together was so beautiful that I could almost picture it in front of me. I especially liked how the article presented the scenery not just as a tourist attraction, but as a local cultural activity created together with village residents.

Kim *Hyeon

What I liked most about this issue was the care and thoughtfulness I could feel throughout Jeju. I could feel the sincerity of the residents who had tended the flower fields themselves for more than half a year, and of the village elders who served as docents. I was struck by how a heartfelt village festival and a thoughtful museum experience came together through the shared idea of care.

Kang *Eun

52p

I liked how the article explained NDAs, which had always seemed difficult to understand, in a clear and accessible way. I learned something new, and it was very helpful.

Event 1.

Winner Announcement for the Friends Addition Event to Commemorate the 24th Founding anniversary of JDC

Shinsegae Gift Certificate (KRW 50,000) Kim *Jeong
